Tulsi Tanti releases 'Let's Save The Planet' at The World Economic Forum, Davos

- Proposes pragmatic model that builds on innovative public/private partnerships to create low-carbon economy
- Highlights viability of renewable energy; its potential to lead the energy mix and reduce reliance on fossil fuels

Pune / Davos: Tulsi Tanti, Chairman, Suzlon Group – the world's fifth leading wind turbine maker – today presented his publication 'Lets Save the Planet' at the annual meeting of the World Economic Forum in Davos. Developed in association with The Climate Group, 'Let's Save the Planet' discusses the opportunities for sustainable development through energy efficient and economically profitable business models.

The document outlines the severe threat of climate change and offers a solution through innovative energy usage and competitive green solutions.

Commenting on the publication, **Tulsi Tanti** said: "Climate change offers us several avenues for sustainable growth. It is a myth that energy efficiency and green development have to be costly and disruptive. Through this publication I wish to highlight the possibility of a safe and secure tomorrow which lies well within our reach."

"I would specially like to thank The Climate Group for the support they have extended in producing this document. I urge you all to join their commendable efforts in bringing about a 'Clean Revolution'."

Mark Kenber, CEO of The Climate Group, said: "Tulsi Tanti is a true pioneer of The Clean Revolution, showing how confronting the global climate challenge goes hand-in-hand with business success and creating lasting prosperity. In Let's Save the Planet, he lays out a set of small but significant steps to take clean technologies to scale and avoid severe environmental damage to the world's economy. I commend it to all those attending this year's World Economic Forum in Davos."

Determining the true cost of energy, and forming alliances between governments, private sector and civil society are essential for securing sustainable future energy needs. The solution outlined in the document requires commitment to legally binding emissions caps, as well as private sector initiatives for sustainable and profitable business models.

The astonishingly high potential of modern day renewable energy is highlighted: while oil and conventional gas may peak between 150-160 years, wind and solar alone has over one million GW of estimated potential power capacity, which can fulfill electricity needs for many centuries.

About Suzion Group:

The Suzlon Group is ranked as the world's fifth largest* wind turbine supplier, in terms of cumulative installed capacity, at the end of 2010. The company's global spread extends across Asia, Australia, Europe, Africa and North and South America with over 18,000 MW of wind energy capacity installed in 28 countries, operations in 32 countries, a workforce of over 13,000. The Group offers one of the most comprehensive product portfolios – ranging from sub-megawatt on-shore turbines at 600 Kilowatts (KW), to the world's largest commercial 6.15 MW offshore turbine – built on a vertically integrated, low-cost, manufacturing base. The Group – headquartered at Suzlon One Earth in Pune, India – comprises Suzlon Energy Limited and its subsidiaries, including REpower Systems SE. Visit us at <u>www.suzlon.com</u>

The Climate Group

The Climate Group is an independent, not-for-profit organization, which brings together a global coalition of the world's most powerful governments, brands and public figures across Asia, Europe and North America. Since 2004 The Climate Group has been working with governments, business leaders and the world's most influential individuals – to push for the policies, technologies and investment needed to make the Clean Revolution commercially viable. Together, it has the power to create a smarter, better, more prosperous future for all. Visit The Climate Group at www.theclimategroup.org
